New opening!   Full-stack Software Engineer

Become a better developer.

If you are looking to master your professional skills in an environment that embraces continuous self-improvement - please, continue.

If high degree of on-the-job autonomy does not scare you, go on.

If transformation of polish IT landscape into a world class Computer Science R&D hub means something to you - read further.

Autea. We are a software and data engineering company from Gliwice. We're looking to hire **Full-stack Software Engineer** with several projects under the belt.

Without further ado, here's what we expect from you:

- A ton of skill and wisdom in working with tech that you consider useful. In no particular order, here are some things many of us like: functional programming, Node.js, Angular, SQL, NoSQL, general bleeding edge stuff

- Appreciation for agile and lean principles that actually work, and solving really hard problems with clean code

- Willingness to be responsible for your work, development and career path. Having said that, don't worry: we'll have your back in whatever you want to achieve, but it's up to you to keep the end goal straight

- A startup-y attitude, and no, to us that doesn't mean things like senseless working hours. Just think of our squad as a lean squad that maintains the work-life balance like real pros.

What we've got for you:

- When we hire you, we trust you. That means you call the shots when it comes to selecting your gear, tech, and ways of working

- We try our best to make sure that every morning, you'll come to work with a smile on your face, feeling like you can make a difference

- Naturally, necessities like equipment and compensation will be taken care of in a manner that all parties maintain said smile (we're talking **8-13k PLN B2B**)
